

ABSTRACT
THE PANORAMA SIDE VIEW MIRROR

The Panorama Side View Mirror Set consists of one array of multiple flat mirrors on each side of the car replacing the present side view mirrors. Each array of mirrors consists of a multiple number of flat mirrors set on a single frame and each successive mirror adjusted to clearly reflect an adjacent area of the side/rear sector beside the car to reveal any object present in that area with superior clarity compared to any image reflected in any curved mirror and including any blind spot in the present side view mirrors.
